Visual Audio Joint-modal Rendering Architecture

OFFENSIVE IW APPLICATION FOR INDIAN ARMY

Unified, Offline, Air-gap Deployable Multi-Modal Deep Learning Platform for Image, Voice, and Video Synthesis

VAJRA (**V**isual **A**udio **J**oint-modal **R**endering **A**rchitecture) - a unified, modular, Integrated AI Suite for Offensive Cognitive Information Warfare, designed to generate and transform synthetic media across image, voice, and video domains using state-of-the-art deep learning models — entirely offline. It is the first platform to formally chain diffusion-based image generation, face identity transfer, voice cloning, lip synchronisation, and talking-face synthesis using contract driven deep learning pipelines in a single unified portal.

Developed By

Student Officer	Lt Col Raunak Malik (mt2502193022@iiti.ac.in)
Guides	Dr. Krishan Berwal, MCTE, Mhow (k2b@ieee.org) Dr. Nagendra Kumar, Dept of CSE, IIT, Indore (nagendra@iiti.ac.in)
Deployment Target	Desktop — Offline, No Cloud API Dependency
Application Domain	Defence / Intelligence / Research / OSINT
